U.S. Environmental Protection Agency Reviews Cleanup at Asbestos Dump Superfund Site

The U.S. Environmental Protection Agency (EPA) is conducting its **fourth** Five-Year Review of the **Asbestos Dump Superfund Site** located in Millington and Meyersville, Morris County, New Jersey. This review seeks to confirm that the cleanup conducted at the site continues to be protective of public health and the environment and is functioning as designed. Cleanup activities included, but were not limited to, the following: 1) installation of a soil cover; 2) in-situ solidification/stabilization of asbestos-contaminated soils; 3) institutional controls to restrict on-site groundwater usage and limit development on the asbestos fill areas; 4) operation and maintenance of the remedy; and 5) implementation of a monitoring program to ensure the effectiveness of the remedy.

A summary of these activities and evaluation of the long-term protectiveness of the remedy will be included in the upcoming Five-Year Review report. The report will be available this summer 2015.

What is an EPA Five-Year Review?

EPA inspects Superfund sites every five years to ensure that cleanups conducted remain fully protective of human health and the environment. These regular reviews, which are required by federal law when contaminants remain at a site, include:

- Inspection of the site and cleanup technologies;
- Review of monitoring data, operating data, and maintenance records, and
- Determination if any new regulatory requirements have been established since EPA's original cleanup decision was finalized.

For more information

There are several ways to review information on this site. The Administrative Record, which includes EPA documents used for selecting the cleanup plan, is available for public review at:

Long Hill Township Public Library

917 Valley Rd
Gillette, NJ 07933
Phone: (908) 647-2088

OR

EPA Region 2, Superfund Records Center

290 Broadway, 18th Floor
New York, NY 10007-1866
Phone: (212) 637-4308
